ROLLING SHUTTERS

Hurricane Protection Code Approved

Color and style are a fundamental elements of Alutex Rolling Shutters to combine security and protection against natural elements with the existing decor of actually any building.

From white to light cream to brown or beige, Alutex Rolling Shutters are custom made to insure the perfect fit of any installation.

Their vented slats are the perfect solution to dim the light of your rooms from bright, to shade to complete darkness at your command.

Supplied with manual or electrical control systems, when motorized rolling shutters can be completely rolled up, closed or stopped in an intermediate position, singularly or in group, by a central command station or remotely by the touch of a button or even by a telephone interface system.

When fully closed, shutters create an air barrier between the curtain of the shutter and the glass of the windows with consequent increase of the insulation factor of each opening.

The resulting reduction of cooling costs in summer as well as heating costs in winter make a rolling shutter investment easy to be recovered within few months.

When Security Is Not An Option

Very often security is a synonym of isolation and confinement. but Alutex Rolling Shutters are the perfect answer with no compromise of freedom and elegance.

Designed to discretely disappear when not needed, Alutex Rolling Shutters offer excellent design, superior craftsmanship, and outstanding quality materials, and are completely fabricated to satisfy the most

stringent quality control inspections. Alutex Rolling Shutters are designed, engineered, and tested to withstand category 4 hurricane wind forces.*

*Depending on the selected slat classes and application.
